RACE

TIMING

YOUR OBJECTIVE : 2h00
TIME PER KILOMETER : 5min40

KM	TIME
1	5'40
5	28'25
10	56'50
15	1H25'15
20	1H53'40
HALF	2H00'00

TRAINING PLAN :

This training plan was prepared by our club Anecy Haute Savoie Athletics, organizer of running events on Anecy.

PREPARATION 8 WEEKS :

This training plan is aimed at people who regularly run and know their MAS.

For those who start running we advise you to start with shorter events (Ex: 10km) in order to climb gradually as the months and years go by to arrive one day at the marathon.

HEALTH CHECK :

The marathon is a race that requires a particularly high effort. Have a health check-up done with your doctor or cardiologist before taking any program.

WEEK 1

FOOTING & THRESOLD

TUESDAY : 1h00

- Footing 1h

THURSDAY : 1h05

- Footing 45' - R5'
- 15' pace 5'40/km

SUNDAY : 1h05

- 20' endurance
- 15' pace 6'00/km - R5'
- 15' pace 6'00/km
- 10' recovery relax

- Footing 45'

THURSDAY : 0h45

- 20' endurance
- 12x 15"/15" pace at 100% of MAS
- 10' recovery relax

D-DAY

SUNDAY : HALF-MARATHON

- It is imperative to respect the pace even if you feel good. Regularity and discipline make success !

ADVICE

SLEEPING :

Sleep is a central element of recovery. It is therefore advisable to do these sports sessions at least 3 to 4 hours before going to bed.

MEDITATION :

Regardless of the level, competitor or casual athlete, meditation is a win-win. Meditation brings awareness of oneself and one's body". More attuned to his feelings and his signals, the athlete feels faster when his body is tired, or needs to recover, and knows "better to manage himself in the long term".

STRETCHING :

Stretching is imperative to help your muscles to recover and maintain mobility. Do at least 15 to 30 min of stretching per day.

To run well remember to stretch all the back muscles as well as lower body muscles (calves, quadriceps, hamstring, and especially psoas).

TIPS

NUTRITION :

Performance requires a good lifestyle regarding food. It is necessary to adapt according to your needs and especially consult your doctor to have informed advice about your physical and metabolic situation.

We recommend a varied and balanced diet, 3 to 5 times a day following training in order to balance the intake.

Low hydration promotes injury and slows recovery. Do not forget to hydrate regularly and adapt according to your training.

AHSA's approach to nutrition awareness focuses on the consumption of seasonal, local and organic products wherever possible.

All advice and tips in this document are for guidance only. Consult your doctor for more details.
